DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks, filed August 28, 2006, with respect to claims 1-21 have been fully considered and are persuasive. The rejection of claims 1-21 under 35 U.S.C. §103(a) has been withdrawn.
2. The objection to method claims 12-21 have been withdrawn.
3. Replacement figure 3 is accepted.

Allowable Subject Matter

4. Claims 1-21 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: The prior art discloses an apparatus for modifying power flow in a segment of an electric power line, each segment including phase lines each having n conductors, where n is greater to or equal to 2, electrically insulated from one another and short-circuited at the ends of the segment. See US 6,486,569, US 6,727,604 and 6,396,172. These patents are discussed in the specification and are issued to the same inventor of the present application.

The prior art does not teach or does not teach or suggest the apparatus comprising a power exchange unit including: a power converter with a first pair of terminals connected in series with at least one of the n conductors, and a second pair of terminals connected to an electrical component capable of circulating power through the power converter for modifying power flow.

The apparatus of claim 1 and the method of claim 12 are allowable over the prior art. Claims 2-11 and 13-21 are allowable because they depend on independent claims 1 and 12.
